

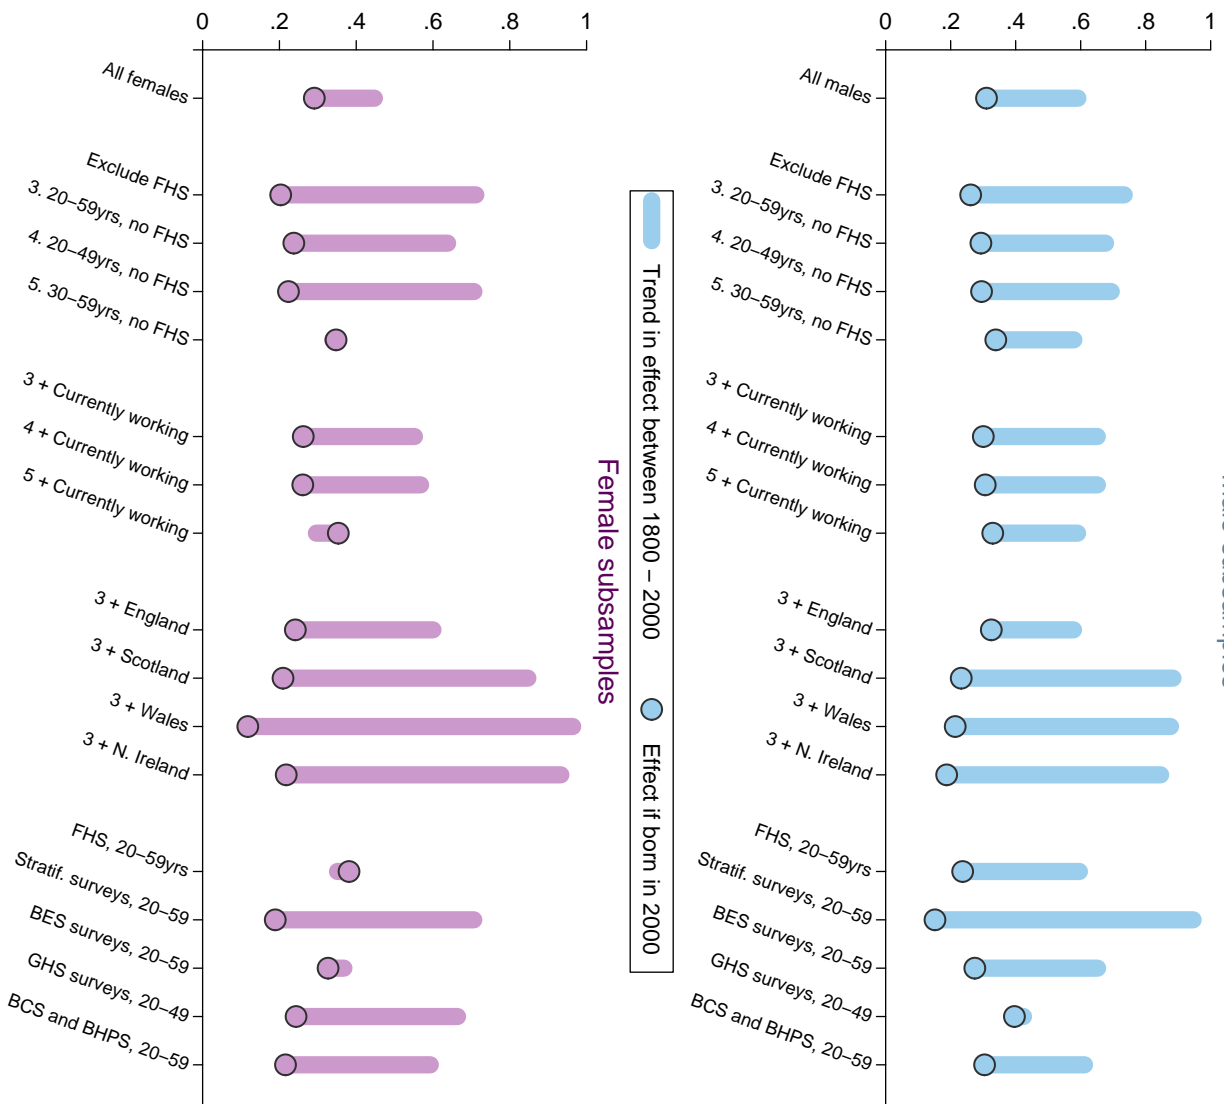

Figure 2: Intergenerational trends, by dataset
 Trends in predicted effects of father's CAMSIS by birth year

Source: Data as Table 2, using data subsets as described in graph.
 Graphs show predicted marginal effect of unit increase in fathers CAMSIS score (F).
 OLS regression: $\text{Own CAMSIS} = F + \text{age} + \text{year of birth}[Y] + Y.F$
 Both own CAMSIS and F are standardised within study (mean 50, sd 15).
