Figure 4: Intergenerational mobility trends

Father−child change in CAMSIS by birth year, controlling for age

(1): R2=0.0063, B=−0.0167
(2): R2=0.0006, B=−0.0077

(1) Men, Linear
(2) Women, Linear
(3) Men, Quadratic
(4) Women, Quadratic
(5) Men, median banding
(6) Women, median banding
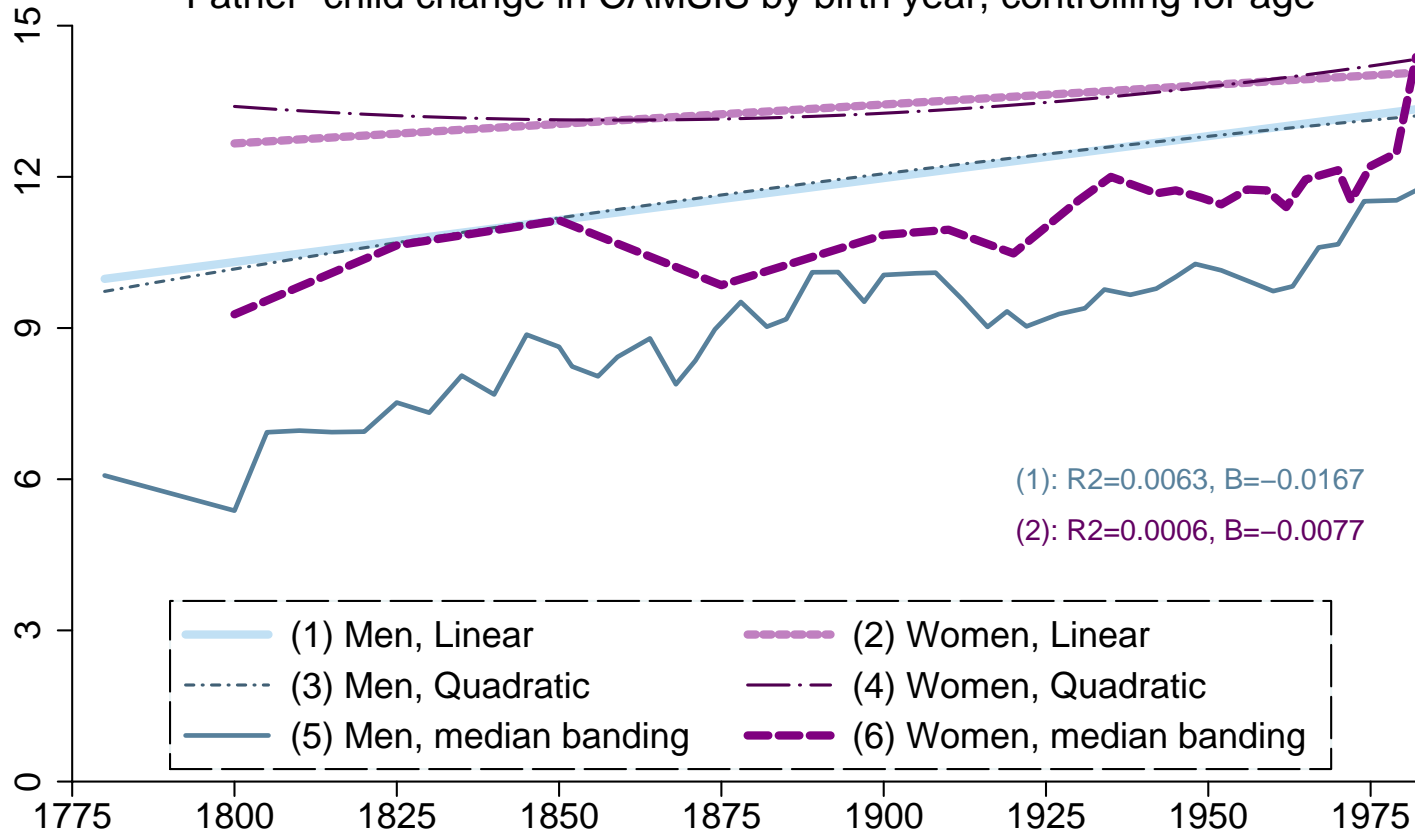

Source: Data as Table 2, ages 20−59, panel duplicates excluded, N = 101540 male, 60104 female.
Father−child change = magnitude [child's CAMSIS (adjusted for age) − father's CAMSIS].
Age adjustment: child's CAMSIS inflated by quadratic age function, re−standardised to mean 50, sd 15.
